# Exploring COVID-19 Robotics Market

— Options for future preliminary design —

---

---

## Focus Areas

Public  
Surfaces

Medical  
Industry

Office  
Spaces

Food  
Stores

# Public Surfaces

## Current Contactless Solutions

- Automated taps/ hand dryers
- Automated doors
- Automated payment

## Areas for Improvement:

- Traffic Light Buttons
- Elevator Buttons
- Door Handles

# Public Surfaces

# Medical Industry

## COVID-19 Impacts:

- Staff Shortages
- Risk of transmission between wards
- Additional PPE procedures

## Competition:

- Nursing/monitoring robots
- Medication and food delivery robots
- Surgery robots

# Medical Industry - Cleaning

- Staff are responsible for the collection, cleaning and distribution of medical instruments.
- Existing medical instrument washers are bulky.
- Aims to reduce the turnaround time for cleaning

# Medical Industry - PPE Removal

# Medical Industry - At Home Monitoring

- Simple health checks
- Asks series of wellness questions
- Sync with phone and record data
- Alert medical professionals if reach dangerous levels

# Automated Office Cleaning

## Current Areas of Competition:

- Air Purification Devices

- Floor Cleaning Robots

## Free Market Areas:

- Desktop Disinfection

- Keyboard Cleaning

# Desktop Disinfecter Robot

## Robot Function

- LIDAR to detect table top edges
- Map the desktop edges
- Clean full desktop surface
- Return to charging station

## Robot Options

- UV-C disinfection
- Spray and wipe function - (requires refilling and larger size)
- Hoover/air duster function for dust

# Keyboard Cleaner

- Hi-touch areas are an area of concern for COVID-19.
- Requires frequent cleaning
- Open offices benefit the most from regular cleaning
- Automated solutions such as a keyboard cleaner offer scheduled and frequent cleaning and do not require human contact.

# Supermarket Automation

COVID-19 Impact:

- Online orders
- Too many orders not enough staff
- Social distancing and people in stores
- It is becoming a popular alternative.

Competition:

- Fully Automated Supermarket redesign
- Japanese robot that stacks shelves

# Supermarket Automation

What can we do?

- Robot that stacks/packs shopping
- Database about where everything is
- Mechanical arm that can grab items
- Some way of packing up groceries
- Need to reduce amount of people in stores while making the experience more convenient and less frustrating

# Main Ideas

Surface Cleaners

Equipment Cleaners

PPE Removal

Home Monitoring

Keyboard Cleaner

Shopping Robot
